CAN WE TALK IN PRIVATE (ABOUT FAMILY PLANNING)?

Winners who recrived private access to vouchers for contraceptives were more likely to take up and use contraception, compared to someon whose leadards were invoked in the voucher program. In contexts in which women have less hargining prover in family planning decisions, providing private access to contraceptives may be an important and effective means of enabling women to achieve their fertility goals.

Featuring an evaluation by Nava Ashraf, Erica Field, and Jean Lee

POISS OF UP

Watern who received the voucher privately were 10 percentage point. [23 percent] more likely to redeem the voucher, compared to women whose husboods were involved in the program. This difference was largely driven by women's desires to hide their challence from their brokends.

The voic their provided women with occase to the contraceptive of their direct, including inspirales which are more easily connected. By legislating contraceptive we want to prevent open point (3) percently higher among women when received the searcher privately, compared to women whose hashands were involved in the program. This difference was allowed their states as large among women who believed their thehands wanted more additional children than the old at the cover of the stady.

Among waters that do not used to train in the resit true pears, these who reasoned the source producy delayed their mast purposery by an energial of these to the months most than women who resident the seached with the hashood. This portposement approximately applicable health benefit for women and children in Zembia, where the average spacing between programatics 15 of months.

Among women who believed their husbands worsted more children than they did, women who received the woucher privately were less likely to report being healthy and hoppy. This finding suggests that cracealing contraceptive we may care a new hadestandows.

Can We Talk in Private (About Family Planning)?

Women who received private access to vouchers for contraceptives were more likely to take up and use contraception, compared to women whose husbands were involved in the voucher program. In contexts in which women have less bargaining power in family planning decisions, providing private access to contraceptives may be an important and effective means of enabling women to achieve their fertility goals.
